Consult

Design

Install

Maintain

*“isoenergy guided us through every step of the consultation, design and installation of our heat pump system. I would highly recommend them to any estate owner looking to control costs and bring their energy systems up to date.”*

Mr Perlhagen  
Pusey House, Oxfordshire

## Ensuring high standards

We understand the difficulties that estate owners face when trying to reduce running costs and carbon emissions. Working with isoenergy's in-house, professional team streamlines this process, offering the reliable, one-stop solution that many of our competitors cannot provide.

We directly employ our own project staff, and only use subcontractors where they bring specialist skills to the team. This allows us to retain the exceptional standards that we are known for across the board from initial consultation to design, installation and ongoing servicing and maintenance.

The plant room at Pusey House serves the main house and various other buildings on the estate.

## How we can help you and your estate

isoenergy specialises in the planning, detailed design, supply and installation of high-quality sustainable energy systems in large country estates. Established over ten years ago, our highly experienced team provide professional guidance and support to country estate owners who are considering incorporating sustainable technology into their estate to protect the next generation from a volatile fossil fuel market.

## Our experience

Over the past ten years we have installed renewable energy systems in over 1,000 homes across England and Wales with particular emphasis on historic houses and country estates, many of which are listed.

We are expert in designing solutions for buildings that are considered hard to heat. Over 70% of our business comes from client recommendations and we are very proud of our reputation as the best installers of renewable energy for country estates.

## Reliability at every step

Established in 2006, we are proud to have gone from strength-to-strength, whilst we have watched many sustainable energy companies fall by the wayside. We pride ourselves on our exceptional customer service and the quality of our work, taking full responsibility for our designs.

The quality of our work also shows in our commitment to maintenance available 24/7/365.

Edgcote House Estate in Northamptonshire benefits from a ground source heat pump system with energy collected from a lake. In addition, there is a water wheel and two solar photovoltaic arrays proving electricity for buildings on the estate.

Waterwheel micro hydro scheme

Chilworth Manor Estate, Surrey Hills

Buildings heated by isoenergy ground source heat pump systems include the main house (*above*) and three other houses on the estate. The main house's outdoor pool is also heated with an isoenergy air source heat pump system.

*“The team at isoenergy have been so useful over the years that we turn to them each time we need to upgrade one of the heating systems on the estate. I wouldn't hesitate to recommend them to anyone seriously looking into renewable energy even though they were not the cheapest quote. In fact, don't waste your time with anybody else, you will end up getting isoenergy to fix it if you do!”*

Graham Wrigley  
Chilworth Manor
